

**ABSTRACT**

Highly concentrated, storage stable aqueous dispersions of a light stabilizer or of a mixture of a light stabilizer and an antioxidant, having an active substance content of more than 47% by weight, which comprise at least one nonionic wetting agent as dispersant and a polyglycol as solubilizer, and also 0.2% to 5% by weight of oleic acid as flow improver. Further constituents can be anionic wetting agents and biocides. These dispersions of the invention can be incorporated easily into coating compositions, e.g., an aqueous dispersion, an aqueous emulsion or an aqueous solution of a binder based on crosslinkable alkyd resin, acrylic resin, polyester resin or polyurethane resin.
